1. A function $T(x)$ is continuous and differentiable with values given in the table at the right.

| $x$ | 1.0 | 1.4 | 1.8 | 2.2 | 2.6 |
| :---: | :--- | :--- | :--- | :--- | :--- |
| $T(x)$ | 1.06 | 2.2 | 3.2 | 2.8 | 3.1 |

Use the values in the table to estimate the following
A. $T^{\prime}(1.4) \approx$
$T^{\prime}(2.4) \approx$
B. $\lim _{h \rightarrow 0} \frac{T(1.4+h)-T(1.4)}{h} \approx$
C. The average rate of change of $T(x)$ between $x=1.4$ and $x=2.4$.
D. The rate of change of $T(x)$ at $x=1$.
E. The equation of the tangent line to $T(x)$ at $x=1$.
2. The values of the derivative $F^{\prime}(x)$ are given in the table:

| $x$ | 12 | 12.4 | 13 |
| :---: | :---: | :---: | :---: |
| $F^{\prime}(x)$ | 2 | 3 | 3.5 |

Estimate the values of $F(x)$ in the table below.

| $x$ | 12 | 12.4 | 13 |
| :---: | :---: | :---: | :---: |
| $F(x)$ | 8 |  |  |

3. Let $F(x)=10^{x}$. Estimate $F^{\prime}(1)$ using a numerical approach. Give your answer to 4 decimal places.
4. $G(s)=\frac{1}{s^{2}}$. Find $G^{\prime}(2)$ using an algebraic approach. Give an exact answer.
