1	Introduction	9
1.1	A planar system	9
1.1.1	A dynamical system approach	9
1.1.2	An algebraic approach	11
1.1.3	An analytic approach	15
1.1.4	Relevant questions	17
1.2	The Lorenz system	18
1.2.1	A dynamical system approach	18
1.2.2	An algebraic approach	19
1.2.3	An analytic approach	21
1.2.4	Relevant questions	23
1.3	Exercises	25
2	Integrability: an algebraic approach	27
2.1	First integrals	27
2.1.1	A canonical example: The rigid body motion	32
2.2	Classes of functions	34
2.2.1	Elementary first integrals	37
2.2.2	Differential fields	38
2.3	Homogeneous vector fields	39
2.3.1	Scale-invariant systems	40
2.3.2	Homogeneous and weight-homogeneous decompositions	42
2.3.3	Weight-homogeneous decompositions	43
2.4	Building first integrals	44
2.4.1	A simple algorithm for polynomial first integrals	44
2.5	Second integrals	46
2.5.1	Darboux polynomials	47
2.5.2	Darboux polynomials for planar vector fields	48
2.5.3	The Prelle-Singer Algorithm	49
2.6	Third integrals	52
2.7	Higher integrals	55
2.8	Class-reduction	55
2.9	First integrals for vector fields in \mathbb{R}^3 : the compatibility analysis	57
2.10	Integrability	60
2.10.1	Local integrability	60

2.10.2	Liouville integrability	61
2.10.3	Algebraic integrability	61
2.11	Jacobi's last multiplier method	62
2.12	Lax pairs	66
2.12.1	General properties	66
2.12.2	Construction of Lax pairs	74
2.12.3	Completion of Lax pairs	77
2.12.4	Recycling integrable systems	79
2.12.5	More on Lax pairs	80
2.13	Exercises	81
3	Integrability: an analytic approach	85
3.1	Singularities of functions	86
3.2	Solutions of differential equations	87
3.3	Singularities of linear differential equations	88
3.3.1	Fundamental solutions	89
3.3.2	Regular singular points	90
3.4	Singularities of nonlinear differential equations	91
3.4.1	Fixed and movable singularities	91
3.5	The Painlevé property	91
3.5.1	Historical digression I	92
3.5.2	Painlevé's α -method	94
3.5.3	The isomonodromy deformation problem	96
3.5.4	Applications	96
3.6	Painlevé equations and integrable PDEs	97
3.6.1	The theory of solitons and the Inverse Scattering Transform	97
3.6.2	The Ablowitz-Ramani-Segur conjecture	98
3.7	The PDE Painlevé test	99
3.7.1	Integrability of ODEs	101
3.8	Singularity analysis	101
3.8.1	Step 1: The dominant behavior	102
3.8.2	Step 2: Kovalevskaya exponents	105
3.8.3	Step 3: The local solution	108
3.8.4	Formal existence of local solutions	111
3.8.5	Companion systems	114
3.8.6	Convergence of local solutions	117
3.8.7	A short list of singularity analyses	119
3.9	The Painlevé tests	119
3.9.1	Painlevé test #1: The Hoyer-Kovalevskaya method	120
3.9.2	Painlevé test #2: The Gambier-ARS algorithm	125
3.9.3	Painlevé test #3: The Painlevé-CFP algorithm	128
3.9.4	Painlevé property and normal forms	131
3.10	The weak-Painlevé conjecture	141
3.11	Patterns of singularities for nonintegrable systems	143
3.11.1	Kovalevskaya fractals	143
3.11.2	Singularity clustering.	144

3.12	Finite time blow-up	145
3.13	Exercises	152
4	Polynomial and quasi-polynomial vector fields	157
4.1	The quasimonomial systems	158
4.2	The quasimonomial transformations	158
4.3	New-time transformations	160
4.4	Canonical forms	161
4.5	The Newton polyhedron	162
4.6	Transformation of the Newton polyhedron	163
4.7	Historical digression: a new-old formalism	165
4.8	Algebraic Degeneracy	166
4.8.1	Degeneracy of matrix \hat{A}	167
4.8.2	Degeneracy of matrix B	168
4.9	Transformation of first integrals	168
4.10	An algorithm for polynomial first integrals	169
4.11	Jacobi's last multiplier for quasimonomial systems	171
4.12	Application: semi-simple normal forms	172
4.13	Quasimonomial transformation and the Painlevé property	172
4.13.1	The transformations group of the Riemann sphere	173
4.14	Painlevé tests and quasimonomial transformations	174
4.14.1	The dominant balances	174
4.14.2	Dominant balance and Newton's polyhedron	176
4.14.3	The Kovalevskaya exponents	178
4.14.4	Quasimonomial transformation of local series	178
4.15	The Painlevé test for the Lotka-Volterra form	180
4.15.1	Step 1: dominant balances	181
4.15.2	Step 2: Kovalevskaya exponents	181
4.15.3	Step 3: compatibility conditions	181
4.16	Transformation of singularities	183
4.16.1	New-time transformation of local series	183
4.16.2	The weak-Painlevé conjecture	185
4.16.3	New integrable systems	187
4.17	Exercises	190
5	Nonintegrability	193
5.1	The general approach: the variational equation	194
5.1.1	Nonintegrability of linear systems	195
5.2	First integrals and linear eigenvalues	196
5.3	First integrals and Kovalevskaya exponents	198
5.3.1	Yoshida's analysis	199
5.3.2	Resonances between Kovalevskaya exponents	201
5.3.3	Kovalevskaya exponents and Darboux polynomials	204
5.3.4	Kovalevskaya exponents for Hamiltonian systems	205
5.4	Complete integrability and resonances	206
5.5	Complete integrability and logarithmic branch points	206

5.6	Multivalued first integral and local solutions	208
5.7	Partial integrability	209
5.7.1	A natural arbitrary parameter	209
5.7.2	Necessary conditions for partial integrability	210
5.8	Exercises	214
6	Hamiltonian systems	217
6.1	Hamiltonian systems	217
6.1.1	First integrals	220
6.2	Complete integrability	222
6.2.1	Liouville integrability	222
6.2.2	Arnold-Liouville integrability	222
6.3	Algebraic Integrability	224
6.4	Ziglin's theory of nonintegrability	225
6.4.1	Hamiltonian systems with two degrees of freedom	229
6.4.2	Ziglin's theorem in n dimensions	232
6.4.3	More on Ziglin's theory	233
6.4.4	The Morales-Ruiz and Ramis theorem	234
6.5	Exercises	235
7	Nearly integrable dynamical systems	237
7.0.1	An introductory example	238
7.1	General Setup	241
7.1.1	General assumptions	241
7.1.2	Comments on the assumptions	242
7.2	A perturbative singularity analysis	242
7.2.1	The Painlevé test	242
7.2.2	The Ψ -series	243
7.2.3	Epsilon-expansion for the Ψ -series	243
7.3	The Melnikov vector in n dimensions	246
7.3.1	The variational equation	246
7.3.2	The Melnikov vector	248
7.3.3	The method of residues	248
7.4	Singularity Analysis and the Melnikov vector	251
7.4.1	The fundamental local solution	251
7.4.2	Residues and local solutions	252
7.4.3	The compatibility conditions and the residues	253
7.5	The algorithmic procedure	255
7.5.1	The computation of the Melnikov vector: a non-algorithmic procedure	255
7.5.2	The algorithmic procedure	255
7.6	Some illustrative examples	256
7.7	Exercises	262
8	Open problems	263
